

Bug: completed Field Returns Incorrect Value When Filtering Projects

Story

Story 8: Retrieve all active projects

Pre-Conditions

At least one project created on the server with completed set to false and active set to true.

Steps to Reproduce

- Send GET request to `http://localhost:4567/projects?active=true&completed=false`
- Nothing needs to be sent in body

Bug Description

Note that since the query parameters `active=true` and `completed=false` are provided, the API should return only projects matching both filters; however, the returned projects contain entries where `completed` is true instead of false, meaning the `completed` filter is not correctly applied or the field value is misreported in the response.

Frequency

Occurs all the time.

Productivity Impact

Medium

Notes

None.
