

Bug: Non-Existing TODO ID Returns All Projects Instead of 404

Story

Story 18: Retrieve all projects associated with a todo

Pre-Conditions

None.

Steps to Reproduce

- With a non-existing TODO id, send GET request to `http://localhost:4567/todos/:id/tasksof`
- Nothing needs to be sent in body

Bug Description

Note that since the todo id does not exist, the todo object does not exist, and therefore this request should return a 404 Not Found error with a relevant and descriptive error message; however, it returns a 200 OK along with the full list of all projects existing in the API, meaning the non-existence check is not performed by the API for this endpoint.

Frequency

Occurs all the time.

Productivity Impact

Low

Notes

None.
