

Bug: Active Filter Ignored When Retrieving Projects by Category

Story

Story 14: Retrieve all projects of a specific category

Pre-Conditions

At least one category and one project assigned to that category exist on the server, with the project having active set to true.

Steps to Reproduce

- With an existing category id, send GET request to `http://localhost:4567/categories/:id/projects?active=true`
- Nothing needs to be sent in body

Bug Description

Note that since the query parameter `active=true` is provided, the API should return only projects where active is true and that are assigned to the specified category; however, it returns an empty list even when matching projects exist, meaning the active filter is not applied when querying projects through the category endpoint.

Frequency

Occurs all the time.

Productivity Impact

Medium

Notes

None.
